This course focuses on the economics of energy and environmental regulations in the United States. It is designed to give students practical experience in making connections between intermediate microeconomic concepts and real-world regulatory policy issues. The emphasis will be on critical thinking to answer questions like the following:

- How do energy markets work?
- What are the effects of energy markets on the environment?
- When should the government intervene to regulate a market?
- What is the appropriate form of government intervention in a market?
- What is the role of energy policy in mitigating environmental damage?

The course material will be divided approximately equally between energy issues and environmental issues. Students who are primarily interested in energy markets will gain an understanding of the impact of environmental externalities and how these externalities are regulated. Students who are primarily focused on environmental issues will learn how energy markets work, and how these markets can be incentivized to reduce environmental damage.

Throughout the semester, we will review some of the key concepts in microeconomics that are needed for understanding energy and environmental policy issues. My assumption is that you have already taken PubPol 330 or 555 or their equivalent.

We will apply these concepts to current, real-world events. We won't have time for every issue! But by the end of the semester, you will have the necessary tools and concepts to analyze a broad range of issues.

**Readings and course website**

We will be using *Markets and the Environment*, the second edition, by Keohane and Olmstead. An e-book is available through the library, and paper copies are not very expensive. This will be supplemented with other required readings (on Canvas) designed to help us explore current issues and put our theory into a practical context.

Course-related information, class handouts, and readings will all be available on the course Canvas site. Please let me know if you have any difficulties accessing the site. Electricity Strategy Game updates and other announcements will be distributed via email.
Grading
Grading will be as follows:
- Class participation: 10%
- ESG memo: 30%
- Reading reflections: 30%
- Essay (see breakdown below): 30%
  - Topic: 5%
  - First draft: 10%
  - Second draft: 15%

Reading reflections
At the beginning of each class period, a short reading reflection is due, quickly summarizing and responding critically to the reading assignment for the day. Detailed instructions will be provided separately.

Simulation game
An important part of this course is a team-based market simulation game called the ESG (Electricity Strategy Game). Grading for the game will be based on a team memo and your team's performance in the game (we'll talk about what that means in class).

Essay
For this essay, you will be asked to write a short paper on a climate-related policy. Further details will be provided early in the semester.

How to contact me
I encourage you to come to office hours. They give us a chance to discuss things in more depth than is possible via email. I am also available by appointment outside of scheduled office hours.

Attendance and participation
Lectures, class discussions, and readings are complements, not substitutes. I will assume that you have read the material before class. Also I will cover things in lecture that are not in the readings. I will drop your two lowest participation scores.

Academic expectations
I take academic dishonesty and plagiarism very seriously, and violations will result in disciplinary action. Resources on writing are available (e.g., https://guides.lib.umich.edu/c.php?g=1039501&p=7538393 and https://apps.lib.umich.edu/sites/default/files/services/instruction/types_of_plagiarism_accessible.pdf).
Modality
Classes will be held in-person in Weill Hall unless public health measures put in place by the Ford School mandate otherwise. My assumption is that you will attend in-person classes unless you communicate otherwise to me and to Student Services. I expect some of you will need to self-isolate at points in the semester (see the Public Health Protection Policy below). I will be flexible in response to these concerns, so please communicate with me so that I can help you succeed in the course.

Ford School inclusivity statement
Members of the Ford School community represent a rich variety of backgrounds and perspectives. We are committed to providing an atmosphere for learning that respects diversity. While working together to build this community we ask all members to:

- share their unique experiences, values and beliefs
- be open to the views of others
- honor the uniqueness of their colleagues
- appreciate the opportunity that we have to learn from each other in this community
- value one another’s opinions and communicate in a respectful manner
- keep confidential discussions that the community has of a personal (or professional) nature
- use this opportunity together to discuss ways in which we can create an inclusive environment in Ford classes and across the UM community

Ford School public health protection policy
In order to participate in any in-person aspects of this course—including meeting with other students to study or work on a team project—you must follow all the public health safety measures and policies put in place by the State of Michigan, Washtenaw County, the University of Michigan, and the Ford School. Up to date information on U-M policies can be found at https://campusblueprint.umich.edu/. It is expected that you will protect and enhance the health of everyone in the Ford School community by staying home and following self-isolation guidelines if you are experiencing any symptoms of COVID-19

Student mental health and wellbeing
The University of Michigan is committed to advancing the mental health and wellbeing of its students. We acknowledge that a variety of issues, both those relating to the pandemic and other issues such as strained relationships, increased anxiety, alcohol/drug problems, and depression, can directly impact students’ academic performance and overall wellbeing. If you or someone you know is feeling overwhelmed, depressed, and/or in need of support, services are available.

You may access counselors and urgent services at Counseling and Psychological Services (CAPS – https://caps.umich.edu/) and/or University Health Service (UHS – https://www.uhs.umich.edu/mentalhealthsvcs). Students may also use the Crisis Text Line (text '4UMICH' to 741741) to be connected to a trained crisis volunteer. You can find additional resources both on and off campus through the University Health Service (https://uhs.umich.edu/stressresources) and through CAPS (https://caps.umich.edu/article/um-mental-health-resources).

Accommodations for students with disabilities
If you believe you need an accommodation for a disability, please reach out to U-M Services for Students with Disabilities (SSD – https://ssd.umich.edu/) office to help determine appropriate academic accommodations and how to communicate about your accommodations with your professors. Any information you provide will be treated as private and confidential.
Academic integrity
The Ford School academic community, like all communities, functions best when its members treat one another with honesty, fairness, respect, and trust. We hold all members of our community to high standards of scholarship and integrity. To accomplish its mission of providing an optimal educational environment and developing leaders of society, the Ford School promotes the assumption of personal responsibility and integrity and prohibits all forms of academic dishonesty, plagiarism and misconduct. Academic dishonesty may be understood as any action or attempted action that may result in creating an unfair academic advantage for oneself or an unfair academic advantage or disadvantage for any other member or members of the acdemic community. Plagiarism involves representing the words, ideas, or work of others as one’s own in writing or presentations, and failing to give full and proper credit to the original source. Conduct, without regard to motive, that violates the academic integrity and ethical standards will result in serious consequences and disciplinary action. The Ford School's policy of academic integrity can be found in the MPP/MPA, BA, and PhD Program handbooks (e.g. https://www.dropbox.com/s/oxbgig3kw5dwjzy/FINAL 2022 Masters Handbook.pdf). Additional information regarding academic dishonesty, plagiarism and misconduct and their consequences is available at: http://www.rackham.umich.edu/current-students/policies/academic-policies/section11#112

Use of technology
There is very good evidence that laptops and tablets make it harder to learn for many people. As a result, I do not generally allow laptops, phones, or other screens in the classroom. Do let me know if you require a laptop, for instance because of SSD accommodations.

Students should follow instructions from their instructor as to acceptable use of technology in the classroom, including laptops, in each course. All course materials (including slides, assignments, handouts, pre-recorded lectures or recordings of class) are to be considered confidential material and are not to be shared in full or part with anyone outside of the course participants. Likewise, your own personal recording (audio or video) of your classes or office hour sessions is allowed only with the express written permission of your instructor. If you wish to post course materials or photographs/videos of classmates or your instructor to third-party sites (e.g. social media), you must first have informed consent. Without explicit permission from the instructor and in some cases your classmates, the public distribution or posting of any photos, audio/video recordings or pre-recordings from class, discussion section or office hours, even if you have permission to record, is not allowed and could be considered academic misconduct.

Please review additional information and policies regarding academic expectations and resources at the Ford School of Public Policy at: https://intranet.fordschool.umich.edu/academic-expectations
